About Me

I am a creative and organized master's student from NTNU. I am passionate about programming and developing innovative solutions. Throughout my studies and summer job I have gained solid knowledge and experience with core programming languages such as Java, Python, Kotlin, React/Next.js, SQL and C. I learn and grasp new concepts quickly and approach problems with a systematic, analytical and solution – oriented mindset. Through various work experiences and academic projects, I have also developed strong leadership and collaboration skills. I am looking for an appropriate opportunity which fulfils my professional ambitions.

Education

08.2026	NTNU Masters in Informatics: Artificial Intelligence Currently pursuing a master's degree in Artificial Intelligence. During my first year, my courses include Modern Machine Learning in Practice, Visual Computing Fundamentals, <i>and</i> Introduction to Artificial Intelligence.
08.2023 - 06.2026	University of Oslo Bachelor's in computer science: Programming and System architecture Throughout my bachelor's degree I have gradually developed a good understanding of concepts such as object-oriented programming, application development, operative systems, databases, information security and AI and machine learning.
08.2020 – 06.2023	Skagerrak International School International Baccalaureate <i>Specialized in STEM subjects:</i> Math AA HL, Physics HL, Chemistry HL
05.2012 – 06.2020	Kongsberg International School, Primary and Middle School International Baccalaureate

Major Achievement

03.2025 – 05.2025	Development of the app SunSaver 2 nd Year Project work at UiO
-------------------	---

Developed the *SunSaver* app as part of a project work at UiO, in collaboration with the Norwegian Meteorological Institute. **This App won 3rd Place out of 60 projects.** Worked in a multidisciplinary team of 6 people and contributed to both front-end and back-end development, with a focus on API integration, app architecture, and design. The team used agile methodologies such as Scrum and Kanban throughout the software development process.

Have been part of the following phases of the project: Customer Survey, Requirement Specification, Design, Coding, Testing and Software Deployment.

- **Technology and Skills:** Android Studio, Kotlin, Figma, Jetpack Compose

Relevant experience

15.6.2026 - 7.8.2026 **Software Development Intern** | Kongsberg Maritime, Project Revolution Green

Member of the Data Analysis and Visualization team, responsible for designing the website's visual theme, establishing the project structure, and implementing three of the eight pages. Also developed key reusable design components used across the website such as the various filterbars and the sidebar.

- **Technology and skills:** React/Next.js, Figma, Apache echarts, leaflet map.

12.2024 -09.2025 **Voluntary Software Intern** | Optime A Halliburton Service

Worked as a Software Intern supporting User Interfaces for Remote Operated Control System (ROCS). I was responsible for, UI Design, Back End Data Processing, Software testing, User Manual.

- **Technology and Skills:** C, ControlWare program, Modbus Slave

09.2025 – 11.2025 **Mentor Volunteer** | First Lego League

First Lego League is an initiative that promotes STEM learning for young students. The theme was archaeology, and I mentored a group of participants as they developed their project; a website that provides a database for archaeologists to document underwater artifacts. I was responsible for:

- Guiding participants in programming and debugging robot missions using **LEGO Spike Prime**.
- Introducing students to basic concepts in **web development and design**.

- Organizing weekly meetings and mentoring the team through the full **software development cycle**.
- **Technology and skills:** Spike, Wix

Committees

- 08.2026 - **Software Developer** | Dotkom, Online Linjeforening, NTNU
- Part of Dotkom which is the committee that develops and maintains the student association, Online's, website.
- 08.2026 - **AI Engineer** | Cogito, NTNU
- Committee member in a student organization focused on developing and working on real – world AI projects.
 - Part of the **Copperhead** project where the goal is to develop a neural network capable of classifying handwritten digits from the **MNIST** dataset.

Other experiences

- 02.2024 – 06.2026 **Barista** | Espresso House Kongsberg
- Worked part time (20%) as a barista at EspressoHouse Kongsberg.
 - Was in charge of customer service at the cash - register.
 - A great experience to learn about customer expectations and the challenges associated with them.
 - Gained experience working under high pressure whilst maintaining structure, accuracy, and attention to detail in a fast-paced environment.
01. 2024 – 06.2024 **Kindergarten Assistant** | Hovdeplassen Barnehage, Kongsberg
- Assisted in caring for and supervising children aged one and above during play and daily routines.
 - Learned to be patient and improved my communication skills through hands-on work with children.

IT – Skills

- **Programming**
 - o **Java, Python, Kotlin, Latex** – Advanced experience through courses and project work, including the development of *SunSaver*.
 - o **C** – Advanced experience from university courses and volunteer work at Optime.
 - o **HTML and CSS** – Used for web design in middle school. Limited experience.

- **Testing (JUnit)** – Good experience with unit testing in projects in my courses at university.
- **Playwright** – Intermediate experience from testing class (IN3240) in university.
- **NumPy** – Good experience from assignment in machine learning class (IN3050) in university.
- **React/Next.js** – Advanced experience through summer internship.
- **Tools**
 - **Figma** – Used for prototyping and design in my course at university and at my summer job.
 - **Android Studio and IntelliJ** – Used during app development in project work and course assignments. Strong experience in working with jetpack compose and IDE tools.
 - **VSCode** – Actively used for programming in several courses and projects.
 - **Github / Git** – Actively used in team projects; experience with branching, pull requests, merging and version control.
- **Databases and Cloud Services**
 - **API Integration**– Experience from project work where we retrieved weather data from the Norwegian Meteorological Institute.
 - **PostgreSQL** – Basic experience with setting up and using databases from the course IN2090 at UiO.

Languages

- **Fluent in speaking and writing:** Norwegian and English
- **Fluent in speaking:** Tamil
